TMP708 Resistor-Programmable Temperature Switch in SOT Package

1 Features

- Threshold Accuracy:
  - ±0.5°C Typical
  - ±3°C Maximum (60°C to 100°C)
- Temperature Threshold Set By 1% External Resistor
- Low Quiescent Current: 40 μA, Typical
- Open-Drain, Active-Low Output Stage
- Pin-Selectable 10°C or 30°C Hysteresis
- Reset Operation Specified at V_{CC} = 0.8 V
- Supply Range: 2.7 V to 5.5 V
- Package: 5-Pin SOT-23

2 Applications

- Computers (Laptops and Desktops)
- Servers
- Industrial and Medical Equipment
- Storage Area Networks
- Automotive

3 Description

The TMP708 is a fully-integrated, resistor-programmable temperature switch with a temperature threshold that is set by just one external resistor within the entire operating range. The TMP708 provides an open-drain, active-low output and has a 2.7-V to 5.5-V supply voltage range.

The temperature threshold accuracy is typically ±0.5°C, with a maximum of ±3°C (60°C to 100°C). The quiescent current consumption is typically 40 μA. Hysteresis is pin-selectable to 10°C or 30°C.

The TMP708 is available in a 5-pin, SOT-23 package.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TMP708	SOT-23 (5)	2.90 mm x 1.60 mm

(1) For all available packages, see the package option addendum at the end of the datasheet.

Typical Application

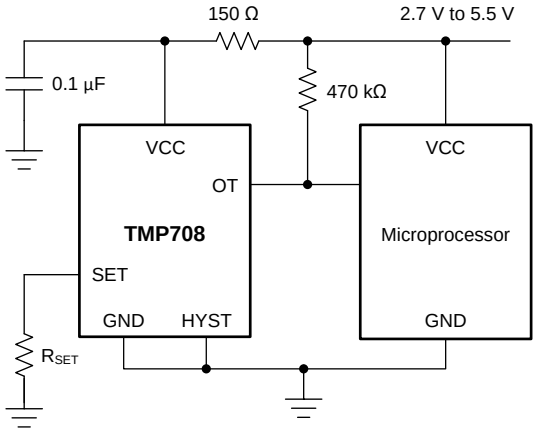

Table of Contents

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (February 2012) to Revision B **Page**

- Added *Device Information*, *ESD Ratings*, and *Recommended Operating Conditions* tables, and *Detailed Description*, *Application and Implementation*, *Power Supply Recommendations*, *Layout*, *Device and Documentation Support*, and *Mechanical, Packaging, and Orderable Information* sections ... 1
- Deleted *Package and Ordering Information* table; information now available in package option addendum located at the end of this data sheet ... 2

Changes from Original (December 2011) to Revision A **Page**

- Updated threshold accuracy feature bullet ... 1
- Updated threshold accuracy text in second paragraph of *Description* section ... 1
- Updated temperature error parameter in the Electrical Characteristics ... 5

5 Pin Configuration and Functions

DBV Package
5-Pin SOT-23

Pin Functions

PIN		TYPE	DESCRIPTION
NAME	NO.		
GND	2	Analog power	Device ground
HYST	4	Digital input	Hysteresis selection. For 10°C, HYST = VCC; for 30°C, HYST = GND.
$\overline{OT}$	3	Digital output	Open-drain, active low output
SET	1	Analog input	Temperature set point. Connect an external 1% resistor between SET and GND.
VCC	5	Analog power	Power-supply voltage (2.7 V to 5.5 V)

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)

		MIN	MAX	UNIT
Voltage	Supply, VCC	–0.3	6	V
	Input, SET and HYST	–0.3	V_{CC} + 0.3	
	Output, OT	–0.3	6	
Current	Input		20	mA
	Output		20	
Temperature	Operating, T_A	–40	125	°C
	Junction, T_J		150	
	Storatge, T_{stg}	–65	150	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)	±4000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 (2)	±1000	
		Machine model (MM)	±200	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	2.7		5.5	V
T_A	Operating temperature	0		125	°C

6.4 Thermal Information

THERMAL METRIC (1)		TMP708 DBV (SOT-23) 5 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	217.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	86.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	44.6	°C/W
ψ_{JT}	Junction-to-top characterization parameter	4.4	°C/W
ψ_{JB}	Junction-to-board characterization parameter	43.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

6.5 Electrical Characteristics

at T_A = 0°C to 125°C and V_{CC} = 2.7 V to 5.5 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
POWER SUPPLY						
I_{CC}	Supply current	V_{CC} = 5 V		40	55	µA
		V_{CC} = 2.7 V		40	55	µA
TEMPERATURE						
T_E	Temperature error	T_A = 60°C to 100°C		±0.5	±3	°C
DIGITAL INPUT (HYST)						
V_{IH}	High-level input voltage		0.7 × V_{CC}			V
V_{IL}	Low-level input voltage				0.3 × V_{CC}	V
I_{lkg_in}	Input leakage current			1		µA
C_{IN}	Input capacitance			10		pF
ANALOG INPUT (SET)						
V_{IN}	Input voltage range		0		V_{CC}	V
DIGITAL OPEN-DRAIN OUTPUT ($\overline{OT}$)						
$I_{(OT\_SINK)}$	Output sink current	V_{OT} = 0.3 V	5	12		mA
$I_{lkg(OT)}$	Output leakage current	V_{OT} = V_{CC}		1		µA

6.6 Typical Characteristics

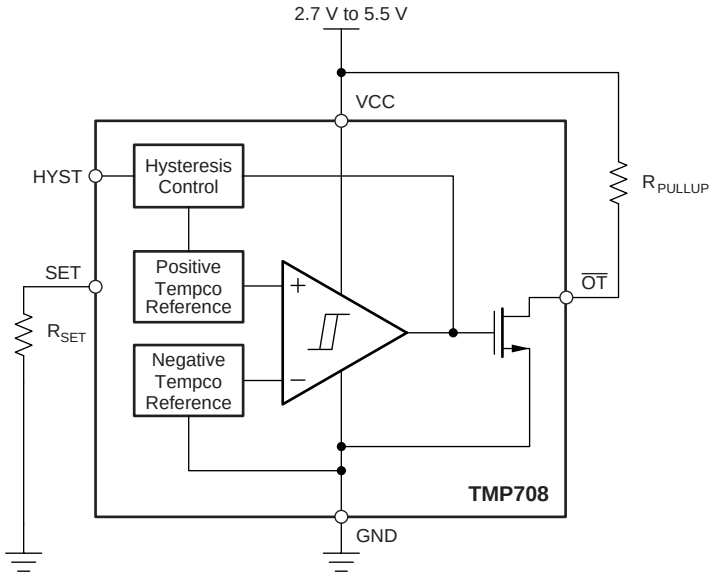
7 Detailed Description

7.1 Overview

The TMP708 is a fully-integrated, resistor-programmable temperature switch that incorporates two temperature-dependent voltage references and one comparator. One voltage reference exhibits a positive temperature coefficient (tempco), and the other voltage reference exhibits a negative tempco. The temperature at which both voltage references are equal determines the temperature trip point.

The Functional Block Diagram shows the comparator, the NFET open-drain device connected to the $\overline{OT}$ pin, the positive tempco reference using the external R_{SET} resistor, the negative tempco reference, and the hysteresis control. The voltage of the positive tempco reference is controlled by external resistor R_{SET}.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Temperature Switch

The TMP708 temperature threshold is programmable from 0°C to 125°C and is set by an external 1% resistor from the SET pin to the GND pin. The TMP708 has an open-drain, active-low output structure that easily interfaces with a microprocessor.

The TMP708 reaches the temperature trip point when the voltage from the positive tempco reference exceeds the voltage from the negative tempco reference. This difference causes the output of the comparator to switch from logic 0 to logic 1. The comparator output drives the gate of the NFET open-drain device, and pulls the voltage on the $\overline{OT}$ pin from logic 1 to logic 0 under these conditions; in other words, the output *trips*. Furthermore, the logic 1 output from the comparator causes the hysteresis control to increase the voltage of the positive tempco reference by an amount set by the logic setting on the HYST pin (10°C for logic 1 on the HYST pin; 30°C for logic 0 on the HYST pin). Increase the voltage of the positive tempco reference after the TMP708 trips to stop the TMP708 from untripping (voltage on the $\overline{OT}$ pin changing from logic 0 to logic 1) until the local temperature reduces by the amount set by the HYST pin. After the local temperature reduces, and the voltage from the positive tempco reference is less than the voltage from the negative tempco reference, the output of the comparator switches from logic 1 to logic 0. This condition causes the voltage on the $\overline{OT}$ pin to change from logic 0 to logic 1 (device untrips).

7.3.2 Hysteresis Input

The HYST pin is a digital input that allows the input hysteresis to be set at either 10°C (when HYST = VCC) or 30°C (when HYST = GND). The hysteresis function keeps the $\overline{OT}$ pin from oscillating when the temperature is near the threshold. Thus, always connect the HYST pin to either VCC or GND. Other input voltages on this pin can cause abnormal supply currents or a device malfunction.

7.3.3 Set-Point Resistor (R_{SET})

Set the temperature threshold by connecting R_{SET} from the SET pin to GND. The value of R_{SET} is determined using either Figure 2 or Equation 1:

$$R_{SET}\ (k\Omega) = 0.0012T^2 - 0.9308T + 96.147 \quad (1)$$

where

- T = temperature threshold in degrees Celsius.

7.4 Device Functional Modes

The TMP708 device has a single functional mode. Normal operation for the TMP708 device occurs when the power-supply voltage applied across the VCC and GND pins is within the specified operating range of 2.7 V to 5.5 V.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TMP708 device is simple to configure. The only external components that the device requires are a bypass capacitor and pullup resistor. Power-supply bypassing is strongly recommended. Use a 0.1-µF capacitor placed as close as possible to the VCC supply pin. To minimize the internal power dissipation of the TMP708 family of devices, use a pullup resistor value greater than 10 kΩ from the $\overline{OT}$ pin to the VCC pin. See the *Hysteresis Input* section for hysteresis configuration, and the *Set-Point Resistor (R_{SET})* section for configuring the temperature threshold.

8.2 Typical Application

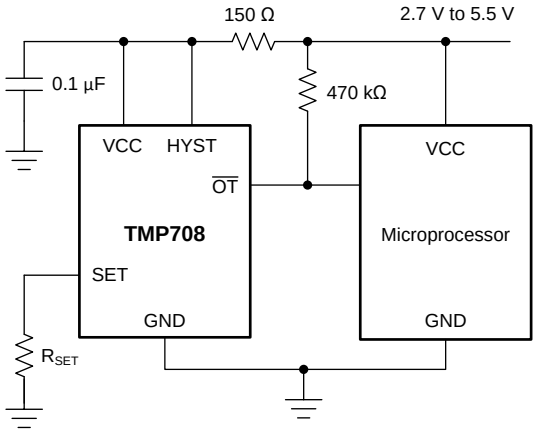


Figure 5. Overtemperature Protection for a 60°C Trip Point

8.2.1 Design Requirements

For this design example, a 2.7-V to 5.5-V power supply, 60°C trip point, and 10°C hysteresis are used.

Typical Application (continued)

8.2.2 Detailed Design Procedure

Connect the HYST pin to VCC for 10°C hysteresis. For a 60°C temperature threshold, see the *Set-Point Resistor (R_{SET})* section to compute an ideal R_{SET} resistor value of 44.619 kΩ. Select the closest standard value resistor available; in this case, 44.2 kΩ. Use a 10-kΩ pullup resistor from the $\overline{OT}$ pin to the VCC pin. To minimize power, a larger-value pullup resistor can be used, but must not exceed 470 kΩ. Place a 0.1-µF bypass capacitor close to the TMP708 device in order to reduce noise coupled from the power supply.

8.2.3 Application Curves

Figure 6 shows an example of the hysteresis feature. The HYST pin is connected to VCC, so the TMP708 device is configured for 10°C of hysteresis. The device is configured for a 60°C trip temperature by the R_{SET} resistor value; therefore, the $\overline{OT}$ output asserts low when the 60°C threshold is exceeded. The $\overline{OT}$ output remains asserted low until the sensor reaches 50°C.

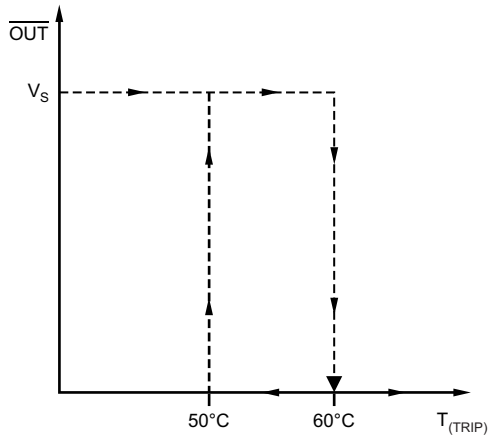

Figure 6. TMP708 Hysteresis Function

9 Power Supply Recommendations

The TMP708 low supply current and supply range allow this device to be powered from many sources. Any significant noise on the VCC pin can result in a trip-point error. Minimize this noise by low-pass filtering the device supply (V_{CC}) using a 150-Ω resistor and a 0.1-μF capacitor.

10 Layout

10.1 Layout Guidelines

The TMP708 is extremely simple to lay out. Figure 7 shows the recommended board layout.

10.2 Layout Example

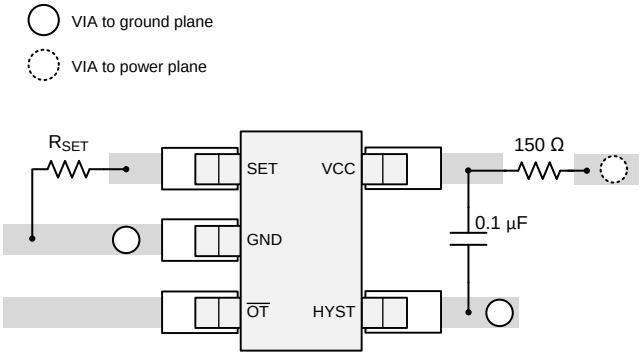

Figure 7. Recommended Layout

10.3 Thermal Considerations

The TMP708 quiescent current is typically 40 μA. The device dissipates negligible power when the output drives a high-impedance load. Thus, the die temperature is the same as the package temperature. In order to maintain accurate temperature monitoring, provide a good thermal contact between the TMP708 package and the device being monitored. The rise in die temperature as a result of self-heating is given by Equation 2:

$$\Delta T_J = P_{DISS} \times \theta_{JA} \quad (2)$$

where

- P_{DISS} = power dissipated by the device.
- θ_{JA} = package thermal resistance. Typical thermal resistance for SOT-23 package is 217.9°C/W.

To limit the effects of self-heating, keep the output current at a minimum level.

11 Device and Documentation Support

11.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community ***TI's Engineer-to-Engineer (E2E) Community.*** Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support ***TI's Design Support*** Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

11.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMP708AIDBVR	ACTIVE	SOT-23	DBV	5	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 125	SBI	Samples
TMP708AIDBVT	ACTIVE	SOT-23	DBV	5	250	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 125	SBI	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

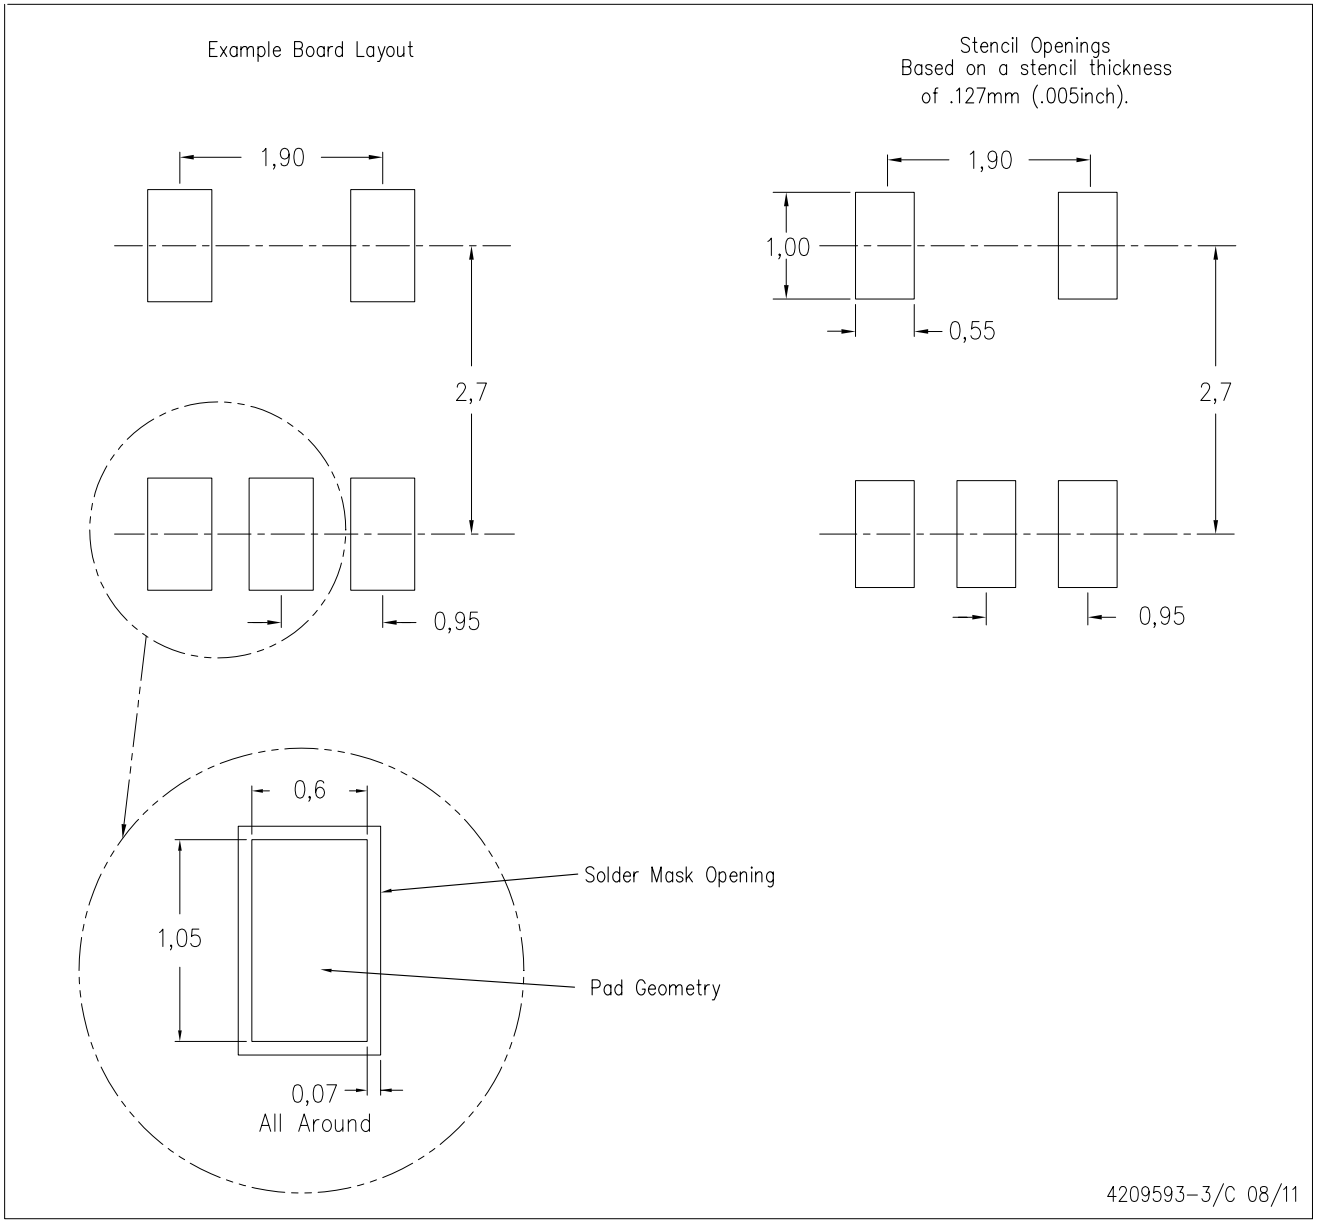
NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
D. Falls within JEDEC MO–178 Variation AA.

DBV (R–PDSO–G5) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
