# Notice for TAIYO YUDEN products

Please read this notice before using the TAIYO YUDEN products.

## **I** REMINDERS

Product information in this catalog is as of October 2016. All of the contents specified herein are subject to change without notice due to technical improvements, etc. Therefore, please check for the latest information carefully before practical application or use of our products.

Please note that TAIYO YUDEN shall not be in any way responsible for any damages and defects in products or equipment incorporating our products, which are caused under the conditions other than those specified in this catalog or individual specification.

Please contact TAIYO YUDEN for further details of product specifications as the individual specification is available.

- Please conduct validation and verification of our products in actual condition of mounting and operating environment before using our products.
- The products listed in this catalog are intended for use in general electronic equipment (e.g., AV equipment, OA equipment, home electric appliances, office equipment, information and communication equipment including, without limitation, mobile phone, and PC). Please be sure to contact TAIYO YUDEN for further information before using the products for any equipment which may directly cause loss of human life or bodily injury (e.g., transportation equipment including, without limitation, automotive powertrain control system, train control system, and ship control system, traffic signal equipment, disaster prevention equipment, medical equipment, highly public information network equipment including, without limitation, telephone exchange, and base station).

Please do not incorporate our products into any equipment requiring high levels of safety and/or reliability (e.g., aerospace equipment, aviation equipment, nuclear control equipment, undersea equipment, military equipment).

When our products are used even for high safety and/or reliability-required devices or circuits of general electronic equipment, it is strongly recommended to perform a thorough safety evaluation prior to use of our products and to install a protection circuit as necessary.

Please note that unless you obtain prior written consent of TAIYO YUDEN, TAIYO YUDEN shall not be in any way responsible for any damages incurred by you or third parties arising from use of the products listed in this catalog for any equipment requiring inquiry to TAIYO YUDEN or prohibited for use by TAIYO YUDEN as described above.

- Please note that TAIYO YUDEN shall have no responsibility for any controversies or disputes that may occur in connection with a third party's intellectual property rights and other related rights arising from use of our products. TAIYO YUDEN grants no license for such rights.
- Please note that unless otherwise agreed in writing, the scope of warranty for our products is limited to the delivered our products themselves and TAIYO YUDEN shall not be in any way responsible for any damages resulting from a fault or defect in our products.
- The contents of this catalog are applicable to our products which are purchased from our sales offices or authorized distributors (hereinafter "TAIYO YUDEN' s official sales channel"). Please note that the contents of this catalog are not applicable to our products purchased from any seller other than TAIYO YUDEN' s official sales channel.

### Caution for Export

Some of our products listed in this catalog may require specific procedures for export according to "U.S. Export Administration Regulations", "Foreign Exchange and Foreign Trade Control Law" of Japan, and other applicable regulations. Should you have any questions on this matter, please contact our sales staff.

\*) The saturation current value (Idc1) is the DC current value having inductance decrease down to 30%. (at 20°C)

\*) The temperature rise current value (Idc2) is the DC current value having temperature increase by 40°C. (at 20°C)

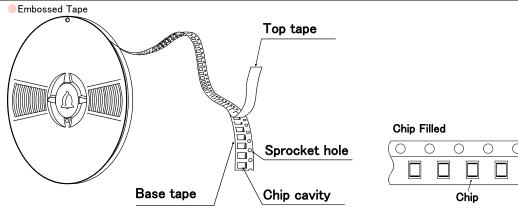

※) The rated current value is following either Idc1 or Idc2, which is the lower one.

| 13. Resistance to vibration |   |  |  |                             |
|-----------------------------|---|--|--|-----------------------------|
| Specified Value             | MA series   |  | Inductance change : Within $\pm 10\%$                |                             |
| Specified value             | MA-H series   |  | No significant abnormality in appearance.            |                             |
|                             | The test samples shall be<br>Then it shall be submitted |  | -  |                             |
|                             | Frequency Range<br>Total Amplitude                      | 1.5mm (May not exceed acceleration 196m/s <sup>2</sup> ) |  |                             |
| Test Methods and<br>Remarks | Sweeping Method   | 10Hz to 55Hz to 10Hz for 1min.                           |  |                             |
| Remarks                     | Time  | X<br>Y<br>Z  | For 2 hours on each X, Y, and Z axis.                |                             |
|                             | Recovery : At least 2hrs o                              | f recovery under t                                       | he standard condition after the test, followed by th | e measurement within 48hrs. |

| 14. Solderability           |   |                |   |
|-----------------------------|---|----------------|---|
| Specified Value             | MA series   |                | At least 90% of surface of terminal electrode is covered by new solder. |
|                             | MA-H series   |                |   |
| <b>T</b> . <b>M</b> .: 1    | The test samples shall be dipped in flux, and then immersed in molten solder as shown in below table.<br>Flux : Methanol solution containing rosin 25%. |                |   |
| Test Methods and<br>Remarks | Solder Temperature  | 245±5°C        |   |
|                             | Time  | $5\pm0.5$ sec. |   |
|                             | XImmersion depth : All sides of mounting ter  |                | minal shall be immersed.  |

| 15. Resistance to soldering heat |   |   |  |  |
|----------------------------------|---|---|--|--|
| Specified Value                  | MA series   | Inductance change : Within $\pm 10\%$   |  |  |
| Specified value                  | MA-H series   | No significant abnormality in appearance.   |  |  |
| Test Methods and<br>Remarks      | Test board material : Glass epoxy-resin<br>Test board thickness : 1.0mm | en at 230°C for 40 seconds, with peak temperature at $260+0/-5$ °C for 5 seconds, 3 times.<br>ne standard condition after the test, followed by the measurement within 48hrs. |  |  |

| 16. Thermal shock           |   |                  |                          |  |
|-----------------------------|---|------------------|--------------------------|--|
| 0                           | MA series   |                  | Inductance chang         | e : Within ±10%  |
| Specified Value             | MA-H series   |                  | No significant abr       | No significant abnormality in appearance.  |
| Test Methods and<br>Remarks |   |                  | low table in sequence. T | w. The test samples shall be placed at specified temperature for specified<br>ne temperature cycle shall be repeated 100 cycles. |
|                             | 4   | Room temperature | Within 3                 |  |
|                             | Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs. |                  |                          |  |

| 17. Damp heat               |   |                |   |
|-----------------------------|---|----------------|---|
| Crassifierd Malue           | MA series   |                | Inductance change : Within $\pm 10\%$     |
| Specified Value             | MA-H series   |                | No significant abnormality in appearance. |
| <b>T</b> . M .: 1           | The test samples shall be soldered to the test board by the reflow.<br>The test samples shall be placed in thermostatic oven set at specified temperature and humidity as shown in below table. |                |   |
| Test Methods and<br>Remarks | Temperature   | 60±2°C         |   |
| Remarks                     | Humidity  | 90~95%RH       |   |
|                             | Time  | 500+24/-0 hour |   |
|                             | Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs.   |                |   |

| 18. Loading under damp heat |   |                           |   |  |
|-----------------------------|---|---------------------------|---|--|
| Specified Value             | MA series   |                           | Inductance change : Within $\pm 10\%$   |  |
| Specified value             | MA-H series   |                           | No significant abnormality in appearance.   |  |
| Test Methods and<br>Remarks | The test samples shall be soldered to the te<br>The test samples shall be placed in them<br>continuously as shown in below table. |                           | nostatic oven set at specified temperature and humidity and applied the rated current |  |
|                             | Recovery : At least   | 2hrs of recovery under th | ne standard condition after the test, followed by the measurement within 48hrs.       |  |

| 19. Low temperatur | 19. Low temperature life test   |                             |   |  |
|--------------------|---|-----------------------------|---|--|
| Specified Value    | MA series   |                             | Inductance change : Within $\pm 10\%$   |  |
| Specified Value    | MA-H series   |                             | No significant abnormality in appearance.   |  |
|                    | The test samples sha  | all be soldered to the test | board by the reflow. After that, the test samples shall be placed at test conditions as shown |  |
| Test Methods and   | Is and in below table.  |                             |   |  |
| Remarks            | Temperature   | $-40\pm2^{\circ}C$          |   |  |
|                    | Time  | 500+24/-0 hour              |   |  |
|                    | Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs. |                             |   |  |

| 20. High temperature life test |   |                            |   |
|--------------------------------|---|----------------------------|---|
| Specified Value                | MA series   |                            | Inductance change : Within $\pm 10\%$   |
| Specified value                | MA-H series   |                            | No significant abnormality in appearance.   |
|                                | The test samples sha  | ll be soldered to the test | board by the reflow. After that, the test samples shall be placed at test conditions as shown |
| Test Methods and               | in below table.   |                            |   |
| Remarks                        | Temperature   | 85±2°C                     |   |
|                                | Time  | 500+24/-0 hour             |   |
|                                | Recovery : At least 2hrs of recovery under the standard condition after the test, followed by the measurement within 48hrs. |                            |   |

| 21. Loading at high temperature life test |             |  |
|---|-------------|--|
| Specified Value                           | MA series   |  |
| Specified value                           | MA-H series |  |

| 22. Standard condition |             |   |  |
|------------------------|-------------|---|--|
| Specified Value        | MA series   | Standard test condition : Unless otherwise specified, temperature is $20\pm15^\circ$ C and $65\pm20\%$ of relative humidity.  |  |
|                        | MA-H series | When there is any question concerning measurement result: In order to provide correlation data, the test shall be condition of $20\pm2^{\circ}C$ of temperature, $65\pm5\%$ relative humidity. Inductance is in accordance with our measured value. |  |
|                        |             |   |  |

# METAL CORE WIRE-WOUND CHIP POWER INDUCTORS (MCOIL<sup>™</sup> MA SERIES / MCOIL<sup>™</sup> MA-H SERIES)

### PRECAUTIONS

| 1. Circuit Design |  |
|-------------------|--|
| Precautions       | <ul> <li>Operating environment</li> <li>The products described in this specification are intended for use in general electronic equipment, (office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.</li> </ul> |

| 2. PCB Design            |   |
|--------------------------|---|
| Precautions              | <ul> <li>◆Land pattern design</li> <li>1. Please refer to a recommended land pattern.</li> </ul>  |
| Technical considerations | <ul> <li>Land pattern design</li> <li>Surface Mounting</li> <li>Mounting and soldering conditions should be checked beforehand.</li> <li>Applicable soldering process to this products is reflow soldering only.</li> </ul> |

| 3. Considerations        | 3. Considerations for automatic placement  |  |  |
|--------------------------|--|--|--|
| Precautions              | <ul> <li>Adjustment of mounting machine</li> <li>1. Excessive impact load should not be imposed on the products when mounting onto the PC boards.</li> <li>2. Mounting and soldering conditions should be checked beforehand.</li> </ul> |  |  |
| Technical considerations | <ul> <li>Adjustment of mounting machine</li> <li>1. When installing products, care should be taken not to apply distortion stress as it may deform the products.</li> </ul>  |  |  |

| 4. Soldering                |  |
|-----------------------------|--|
| Precautions                 | <ul> <li>Reflow soldering <ol> <li>Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified.</li> <li>The product shall be used reflow soldering only.</li> <li>Please do not add any stress to a product until it returns in normal temperature after reflow soldering.</li> <li>Lead free soldering <ol> <li>When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, soldering etc sufficiently.</li> </ol> </li> </ol></li></ul> |
| Technical<br>considerations | Reflow soldering 1. If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products.<br>Recommended reflow condition (Pb free solder)  300 300 100 150~180 100 90 ± 30 sec 100 90 ± 30 sec Heating Time [sec]   |

| 5. Cleaning              |  |
|--------------------------|--|
| Precautions              | <ul> <li>♦ Cleaning conditions</li> <li>1. Washing by supersonic waves shall be avoided.</li> </ul>              |
| Technical considerations | <ul> <li>Cleaning conditions</li> <li>1. If washed by supersonic waves, the products might be broken.</li> </ul> |

| 6. Handling                 |   |
|-----------------------------|---|
| Precautions                 | <ul> <li>Handling <ol> <li>Keep the product away from all magnets and magnetic objects.</li> </ol> </li> <li>Breakaway PC boards (splitting along perforations) <ol> <li>When splitting the PC board after mounting product, care should be taken not to give any stresses of deflection or twisting to the board.</li> <li>Board separation should not be done manually, but by using the appropriate devices.</li> </ol> </li> <li>Mechanical considerations <ol> <li>Please do not give the product any excessive mechanical shocks.</li> <li>Please do not add any shock and power to a product in transportation.</li> <li>Pick-up pressure <ol> <li>Please do not push to add any pressure to a winding part. Please do not give any shock and push into a ferrite core exposure part.</li> </ol> </li> <li>Packing <ol> <li>Please avoid accumulation of a packing box as much as possible.</li> </ol> </li> </ol></li></ul> |
| Technical<br>considerations | <ul> <li>Handling <ol> <li>There is a case that a characteristic varies with magnetic influence.</li> <li>Breakaway PC boards (splitting along perforations) <ol> <li>The position of the product on PCBs shall be carefully considered to minimize the stress caused from splitting of the PCBs.</li> </ol> </li> <li>Mechanical considerations <ol> <li>There is a case to be damaged by a mechanical shock.</li> <li>There is a case to be broken by the handling in transportation.</li> <li>Pick-up pressure <ol> <li>Damage and a characteristic can vary with an excessive shock or stress.</li> </ol> </li> <li>Packing <ol> <li>If packing boxes are accumulated, that could cause a deformation on packing tapes or a damage on the products.</li> </ol> </li> </ol></li></ol></li></ul>  |

| 7. Storage condit        | <ul> <li>Storage</li> <li>1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled.</li> <li>Recommended conditions         Ambient temperature : 0~40°C         Humidity : Below 70% RH     </li> </ul>  |
|--------------------------|--|
|                          | <ul> <li>The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes.</li> <li>For this reason, product should be used within 6 months from the time of delivery.</li> <li>In case of storage over 6 months, solderability shall be checked before actual usage.</li> </ul> |
| Technical considerations | <ul> <li>Storage</li> <li>1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes<br/>and deterioration of taping/packaging materials may take place.</li> </ul>   |
